

Toyota Camry 2024 Service Manual

Model Year: 2024 | Make: Toyota | Model: Camry

Table of Contents

1. Engine - 2.5L Dynamic Force
2. Hybrid Battery System
3. Brake System - Regenerative

Engine - 2.5L Dynamic Force

The Camry's 2.5L Dynamic Force 4-cylinder engine (A25A-FXS hybrid variant) achieves 44 mpg combined.

Oil specification: 0W-16 synthetic. Oil life monitor alerts at 5,000-mile intervals.

Engine temperature operating range: 80degC-90degC (176degF-194degF). The thermostat opens at 80degC.

If coolant temperature exceeds 110degC, the system enters limp mode - stop safely and call Toyota Roadside.

Hybrid Battery System

The nickel-metal hydride (NiMH) high-voltage battery is rated for 150,000 miles or 10 years.

Battery voltage should read 230-270V DC under normal operation.

Code P0A0F (Drive Motor "A" Performance) indicates hybrid battery degradation.

Warning: The hybrid system operates at lethal voltages. Only Toyota-certified technicians should service the orange high-voltage cables.

Brake System - Regenerative

The Camry Hybrid uses regenerative braking to recover kinetic energy. The brake pedal feel may differ from conventional vehicles - this is normal. Hydraulic brakes engage at harder pedal pressure.

TPMS sensors require re-initialization after any tire rotation or replacement. Use Toyota Techstream software to reset TPMS IDs.
